Data Engineer Interview Assignment

AI-assisted hands-on build exercise

Requirement

- Build an end-to-end data pipeline using the API below.
- Build the solution using a **Medallion Architecture**. The design of the architecture and layers is up to you.
- The full solution must run locally.
- You may use any technologies you believe are appropriate.
- **AI tools are allowed and expected.** Use them as part of your engineering workflow.

API

Open-Meteo Weather Forecast API

https://open-meteo.com/en/docs

What it is

Open-Meteo is an open-source weather API that provides structured forecast and historical weather data through HTTP. It can be used without an API key for normal non-commercial use.

What we want from the candidate

- **Repository:** the complete working solution, including instructions to run it locally.
- **AI evidence:** screenshots of the material conversations with the AI tools used during the assignment.
